

Python → Collections → [List comprehension](#)

List comprehension → Even numbers

Medium 2 minutes

3296 users solved this problem. Latest completion was about 7 hours ago.

Write a program that takes a list of numbers, creates another list of **even** numbers from the first list, and prints it.

E.g. if `my_numbers = [1, 2, 3, 4, 5]`, then your program should print the list `[2, 4]`.

NB: the list with numbers `my_numbers` is already defined, so you don't have to work with the input.

Report a typo

Write a program

[Code Editor](#) [IDE](#)

Python

```
1 # work with the variable 'my_numbers'
2 print([x for x in my_numbers if x % 2 == 0])
3
```

✓ Correct.
