Create module → The main difference

Easy 29 seconds

1558 users solved this problem. Latest completion was 26 minutes ago.

What is the main difference between Python module and a simple script?

Report a typo

Select one option from the list

- ☐ Scripts are small while modules are large.
- ☐ Scripts are executed directly, while modules are imported from the interpreter or another module.
- ☐ Modules contain only definitions of functions and variables, while scripts contain executable code.
- ☐ Only modules have the `__main__` pattern, while scripts haven't.

Correct.
