

Methods and attributes → I have friends

Medium 2 minutes

3611 users solved this problem. Latest completion was about 2 hours ago.

Below you can see the class `User`.

This class has two methods: `__init__` and `add_friends`.

The `__init__` method does what any `__init__` does, while `add_friends` increases the number of friends that the user has by the value of `n`. However, the `add_friends` method has been defined somewhat incorrectly and right now it doesn't do what it's supposed to do.

Your task is to fix the mistakes in the method.

Hint

Report a typo

Write a program

[Code Editor](#) [IDE](#)

Python

```
1 class User:
2     def __init__(self, username):
3         self.username = username
4         self.friends = 0
5
6     # fix this method
7     def add_friends(self, n):
8         self.friends += n
9         print("{} now has {} friends.".format(self.username, self.friends))
10
```

✓ Correct.

That's an awesome solution! What do you think about showing it off? [Post it to Solutions](#) so other learners can enjoy it too.
