

Python → Data types and operations → Basic data types and operations → [Integer arithmetic](#)

Integer arithmetic → Priority order

 Medium  1 minute 

14181 users solved this problem. Latest completion was 16 minutes ago.

Sort a list from mathematical operations with the **highest** priority to operations with the **lowest** priority.

Thus, operations executed in the first turn will be at the top of your list.

 Report a typo

↩ Put the items in the correct order

parentheses <code>()</code>	<div>↑</div> <div>↓</div>
power <code>**</code>	<div>↑</div> <div>↓</div>
unary minus <code>-</code>	<div>↑</div> <div>↓</div>
multiplication, division, integer division, and remainder <code>*</code> <code>/</code> <code>//</code> <code>%</code>	<div>↑</div> <div>↓</div>
addition and subtraction <code>+</code> <code>-</code>	<div>↑</div> <div>↓</div>

✓ Correct.
