

Python → Functions → Args

Args → Numbers

Medium 3 minutes

2069 users solved this problem. Latest completion was about 2 hours ago.

Write a function called `multiply` that takes a changeable number of arguments and returns their product.

Assume that only integer numbers are to be passed into the function.

Given only one integer number, multiply it by 1. Thus, the product will be equal to this integer.

You are not supposed to call the function, simply implement it.

Code problem

Python

```
1 # put your python code here
2 def multiply(*number, one_number=1):
3     for i in number:
4         one_number = one_number * i
5     return one_number
6
```

✓ **Correct.**
