

Python → Code style → [Naming variables](#)

Naming variables → Good names

Easy 1 minute

11683 users solved this problem. Latest completion was about 1 hour ago.

Here’s a list of variables:

```
1 | number_of_people_in_the_room = 10
2 | model_score = 0.9875
3 | client_name = "Bob"
4 | colorOfTheShirt = "red"
```

Some of them are named according to naming conventions and best practices, others are not.

Copy only the lines with those variables that have good names in your code. You don’t need to use the `print()` function.

Report a typo

Write a program

[Code Editor](#) [IDE](#)

```
1 | # copy the correct variables here
2 | model_score = 0.9875
3 | client_name = "Bob"
4 |
```

Python

✓ Correct.
