Load module → Accessing imported names

Easy 1 minute

4373 users solved this problem. Latest completion was about 1 hour ago.

For every import statement choose the proper way to access `super_function` that is defined in `super_module`.

Report a typo

Match the items from left and right columns

from super_module import super_function	super_function()	↑	↓
import super_module	super_module.super_function()	↑	↓
from super_module import foo	There is no way to access super_function.	↑	↓

Correct.
