

Python → Collections → [Defaultdict and Counter](#)

Defaultdict and Counter → Mississippi

Easy 1 minute

579 users solved this problem. Latest completion was about 22 hours ago.

We have created a `defaultdict` and added some elements there:

```
1 from collections import defaultdict
2
3 letters = defaultdict(int)
4
5 word = "mississippi"
6
7 for letter in word:
8     letters[letter] += 1
```

Match the element with the value you'll get from the `letters`. Note that one value is extra!

Report a typo

Match the items from left and right columns

s	4	↑	↓
m	1	↑	↓
p	2	↑	↓
j	0	↑	↓
	None	↑	↓

Correct.
