

Initialization blocks → The value of a field

Medium 1 minute ?

1757 users solved this problem. Latest completion was about 23 hours ago.

Here’s a class containing two instance initialization blocks.

```
1 class A {
2
3     int field = 2;
4
5     {
6         field++;
7     }
8
9     public A() {
10         field = 8;
11     }
12
13     {
14         field++;
15     }
16 }
```

We have created an instance of the class.

```
1 A instance = new A();
```

What is the value of `field` ?
