Here's a simple wrapper class for values of the `int` type.

```
1 public class Int {
2
3     int val = 1;
4
5     public Int() {
6         val = 2;
7     }
8
9     public Int(int val) {
10
11         this();
12     }
13
14     public Int(int val1, int val2) {
15
16         this(val1 + val2);
17     }
18 }
```

What is the value of the field `val` in the created object?

```
1 Int myInt = new Int(3);
```
