

Python → Data types and operations → Strings → Basic string methods

Basic string methods → All in one

Easy 2 minutes ?

8379 users solved this problem. Latest completion was about 1 hour ago.

Find out how much you can do using just one string method: `replace()`.

Report a typo

Match the items from left and right columns

<code>'robot'.replace('o', '_ ', n)</code>	Replaces n first occurrences of an old substring with a new one.	↑	↓
<code>"".replace("", 'robot')</code>	Inserts a substring into the empty line.	↑	↓
<code>'robot'.replace('o', '')</code>	Removes substrings from the line.	↑	↓
<code>'robot'.replace("", " ")</code>	Adds spacing between letters.	↑	↓

✓ Correct.
