You have declared a class `SomeClass` in the package `org.hyperskill.java`.

```
1 package org.hyperskill.java;
2
3 class SomeClass {
4
5     ??? long longVal;
6 }
```

There is another class `Demo` in the same package. In a method of this class, you have an instance of `SomeClass`.

Which of the listed access modifiers can be written instead of `???` to have an ability to set a value to the field `longVal` of the instance?

Report a typo

↵ Select one or more options from the list

- ☒ no modifier (empty)
- ☐ private
- ☒ protected
- ☒ public
- ☐ static

✓ Correct.
