

Class → The housing problem

Medium 1 minute

5375 users solved this problem. Latest completion was about 17 hours ago.

The code below defines the class `House` and an object of that class. However, the code is somewhat incorrect. Fix the mistakes but do NOT change variable or attribute names (they are necessary for checking).

Hint

Report a typo

Write a program

[Code Editor](#) [IDE](#)

Python

```
1 # definition of the class
2 class House():
3     construction = "building"
4     elevator = True
5
6 # object of the class House
7 new_house = House()
8
```

✓ Correct.
