

Python → Control flow statements → [If statement](#)

If statement → Boolean logic

Easy 1 minute

14868 users solved this problem. Latest completion was about 1 hour ago.

Which logical operator is an alternative to the nested `if` statements?

Suppose we were about to rewrite this code snippet

```
1 | if sound == "music":
2 |     if n_people > 10:
3 |         print("We are at the party!")
```

as follows:

```
1 | if sound == "music" ... n_people > 10:
2 |     print("We are at the party!")
```

How would you change `...` in this case?

Hint

Report a typo

Enter a short text

and

✓ Correct.
