

Python → Collections → [Indexes](#)

# Indexes → Find the third number

Easy 1 minute

10944 users solved this problem. Latest completion was about 2 hours ago.

The list `prices` contains several numbers. Print the third number from this list.  
For example, if `prices` looks like `[170, 309, 224, 991, 4000]`, you should print `224`.

Write a program

[Code Editor](#) [IDE](#)

Python

```
1 # work with the list 'prices' here
2 print(prices[2])
3
```

✓ Correct.
