

Python → Data types and operations → Strings → [Split and join](#)

Split and join → Input text

Medium 3 minutes

6059 users solved this problem. Latest completion was about 3 hours ago.

There are several inputs in the left column. Find the resulting value of `text` after performing all these operations on each input.

```
1 text = input()
2 text = text.replace("o", " ")
3 text = text.split()
4 text = " o".join(text)
```

Report a typo

Match the items from left and right columns

nomelonnolemon	n omel onn olem on	↑	↓
no melon no lemon	n omel on on olem on	↑	↓
n meln n lemn	n omeln on olemn	↑	↓

✓ Correct.
