

Python → Modules and packages → [Create module](#)

Create module → Create module

 Hard  2 minutes 

3056 users solved this problem. Latest completion was 16 minutes ago.

Below is a custom Python module:

```
1  # my_module.py
2
3  name = "John"
4
5  def printer(x):
6      print("Hello,", x)
```

You have already imported this module into your code:

```
1  import my_module
```

Write a line of code that will now call the function *printer()* on the *name* variable.

Hint

 Report a typo

 Enter a short text

my_module.printer(my_module.name)

✓ Correct.
