

Python → Data types and operations → Basic data types and operations → [Comparisons](#)

Comparisons → Focus on the positive

Easy 2 minutes

14038 users solved this problem. Latest completion was 29 minutes ago.

Write a program that reads an integer value from the input and checks if it is positive.

Hints:

0 is not a positive number.

A comparison already returns a boolean, so if you need the result of the comparison, you can print it, like this `print(5 > 9) # False`

Report a typo

Sample Input 1:

8

Sample Output 1:

True

Write a program

[Code Editor](#) [IDE](#)

Python

```
1 # Please don't modify this code
2 # `a` stores an input value
3 a = int(input().strip())
4
5 # put your code here
6 print(a > 0)
7
```

✓ Correct.
