Python → Math → <u>Random module</u>

Random module → From 0 to 1

4896 users solved this problem. Latest completion was about 1 hour ago.

■ Medium © 2 minutes ②

The function used to set a starting point of the random search algorithm is called random.seed() and takes a single integer number. Write a program that takes an integer number n, sets n as a seed and then prints a pseudo-random number from 0 to 1.

The variable n is already defined.

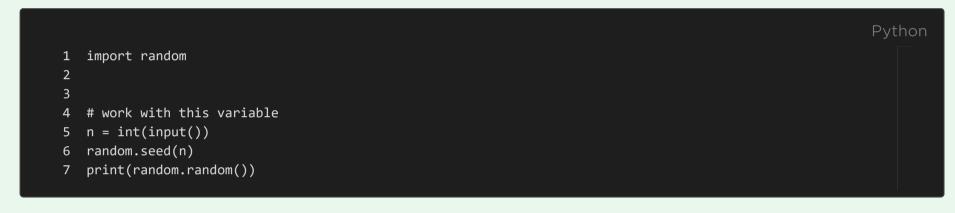

Sample Input 1:

-65

Sample Output 1:

0.414743999308679

Code Editor IDE

✓ Correct.
