Declaring a function → Captain

📶 Medium   🕐 3 minutes   ❔

Define a function that will add the word "captain" before the name of a person.

The function should be named `captain_adder`, take one argument `name` and print the string, i.e. it doesn't have to return anything.

You don't need to call your function, only implement it. Also, you don't need to take input, the `name` variable should come to your function as an argument.

Sample Input:

Jack Sparrow

Sample Output:

captain Jack Sparrow

📑 Report a typo

↓ Write a program

Code Editor   **IDE**

```Python
1   def captain_adder(name):
2       print("captain " + name)
3
```

✓ Correct.
