Java → Basic syntax and simple programs → Methods → Calling a method

Calling a method → Invocation of the built-in method

📊 Medium   🕐 1 minute ❓

There's a method `pow()` in the Math library that takes two parameters and raises the first one to the power of the second.

Your task is to invoke the method so that it raises `a` to the power of `b`.

Write *only the invocation* of the method, as if `a` and `b` are already instantiated.

📋 Report a typo

↧ Enter a short text

```
Math.pow(a, b)
```

✓ Correct.
