Python → Code style → Naming variables

Naming variables → Everest

📊 Medium   🕐 1 minute   ❓

In your program, you need a variable to store the height of the mount Everest (8, 848 m). There are other heights and other mountains in the program, so you cannot simply call it `height`. The name of the variable should reflect the fact that the value is constant and refer to the **measure** and the **object**.

What would be an optimal name for that variable?

📄 Report a typo

↧ Select one option from the list

○ the_height_of_everest_in_meters
○ height_of_everest
○ everest_height
○ MOUNTAIN_HEIGHT
○ mountain_everest
○ EVEREST_HEIGHT

✓ Correct.
