Python → Collections → Sorting a list

Sorting a list → Can't sort my list!

📊 Medium   🕐 1 minute   ❓

Nathan has a list that contains the names of all his friends. He wants to sort it in alphabetical order and then print it. However, when he executes this code:

```
1    my_list = ['Mary', 'Bob', 'Pete', 'Jane']
2    my_list = my_list.sort()
3    print(my_list)
```

only *None* is printed! Help him – find a broken line in his code, fix it and write down the corrected line.

Hint

📋 Report a typo

⌄ Enter a short text

my_list.sort()

✓ Correct.

FEEDBACK

sort() is a function that sorts a list in-place and returns nothing. So, when Nathan assigned my_list.sort() to my_list, he put the result of sort() function (which is None) to my_list. Now my_list contains nothing
