Python → Data types and operations → Basic data types and operations → Type casting

# Type casting → Which type?

📊 Medium  🕐 1 minute  ❔

What type will the result of the following expression have?

```
1    1.0 * 2
```

Write down the type without quotes.

📄 Report a typo

↧ Enter a short text

float  ▲
       ▼

✓ Correct.

**FEEDBACK**

Here, objects of two different types (1.0 is float and 2 is an integer) are multiplied together. Since float type is more complex than int, 2 is converted to float, so the result of the expression will also be a float.
