Python → Collections → Dictionary

Dictionary → Adding an item

📊 Medium   🕐 2 minutes   ❓

Let's say you have a dictionary matching your friends' names with their favorite flowers:

```
1    favfl = {'Alex': 'field flowers', 'Kate': 'daffodil', 'Eva': 'artichoke flower', 'Daniel': 'tulip'}
```

Your new friend Alice likes orchid the most: add this info to the `favfl` dict and print the dict.

NB: Do not redefine the dictionary itself, just add the new element to the existing one.

↓ Write a program

Code Editor   **IDE**

```Python
1   # please work with the variable favfl
2   favfl['Alice'] = 'orchid'
3   print(favfl)
4
```

✓ Correct.
