Python → Data types and operations → Strings → String formatting

String formatting → How long is that word?

📊 Medium 　🕐 2 minutes 　❔

Write a program that calculates the length of a word from the input and prints it out together with the word in the format `word has N letters`. There will always be more than one letter in the word.

Hint

📄 Report a typo

Sample Input 1:

```
serendipity
```

Sample Output 1:

```
serendipity has 11 letters
```

⬇ Write a program

Code Editor　　　　IDE

```python
1  user_input = input()
2  length = len(user_input)
3  print(f'{user_input} has {length} letters')
4
```

✔ Correct.

That's an awesome solution! What do you think about showing it off? **Post it to Solutions** so other learners can enjoy it too.
