Python → Errors and exceptions → Exceptions

Exceptions → Make it work!

📶 Easy   🕐 1 minute   ❓

You have a program which gets two inputs from a user and turns them into integers to compare later. Fix all the syntax errors in this program. Make it compare variables properly and print the necessary result.

📄 Report a typo

Sample Input 1:

```
8
11
```

Sample Output 1:

```
The second one wins
```

Sample Input 2:

```
5
5
```

Sample Output 2:

```
Draw
```

↧ Write a program

Code Editor   **IDE**

```python
1  first = int(input())
2  second = int(input())
3
4  if first > second:
5      print("The first one wins")
6  elif second > first:
7      print("The second one wins")
8  else:
9      print('Draw')
10
```

✓ Correct.

That's an awesome solution! What do you think about showing it off? **Post it to Solutions** so other learners can enjoy it too.
