Python → Collections → Defaultdict and Counter

Defaultdict and Counter → **Dogs**

📶 Medium   🕐 2 minutes   ❓

Look at the code below:

```
from collections import defaultdict

dogs = ["pomeranian", "labrador", "corgi", "corgi", "golden retriever", "corgi", "labrador"]

dogs_dict = defaultdict(int)

for dog in dogs:
    dogs_dict[dog] += 1

print(dogs_dict["corgi"])

print(dogs_dict["husky"])

print(dogs_dict["poodle"])
```

How many keys does the `dogs_dict` have as a result of this code?
