Python → Functions → Kwargs

Kwargs → Miscount

📶 Hard   🕐 2 minutes ❓

How would you make your function accept a varying number of arguments?

🖹 Report a typo

⤓ Select one or more options from the list

- ☐ When calling a function, place * before an iterable to pass its elements into the function.
- ☑ Define a function with ** for keyword arguments.
- ☐ Pass key-value pairs from a dictionary with ** in a function call.
- ☑ Use * when declaring a function to work with a list of non-keyword arguments.

✓ Correct.
